DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to a catalytic process of dehydrogenation of alkyl aromatic to vinyl aromatic, classified in class 585, subclass 440.
- II. Claims 2 and 27, drawn to an apparatus, classified in class 422, subclass 197.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus or by hand such as a radial reactor.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search required for Group I is not required for group II, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Jackson on 12/23/03 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-25.

Affirmation of this election must be made by applicant in responding to this Office action. Claims 19 and 20 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-25 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Patent No. 6,380,449. Although the conflicting claims are not identical, they are not patentably distinct from each other because the conflicting claims also disclose dehydrogenating an alkyl aromatic compound, namely ethylbenzene, to a vinyl aromatic compound, namely styrene in a tubular reactor having mixing section substantially the same as the applicants' claimed reaction zone. There are several differences, namely alkyl aromatic compounds used in the presently claimed process such as diethylbenzene, alkylnaphthalene. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the conflicting process by using any alkyl aromatic compound as the feed to produce corresponding vinyl compounds since

it is expected that alkyl group of these compounds would be dehydrogenated in the conflicting reactor.
